# SELECTERM

## The ideal HARD COPY DEVICE

It looks like an IBM Selectric II\*

It acts like an IBM Selectric II\*

It is a factory warranted IBM Selectric II\*

The **SELECTERM** is all this and more . . . because **micro computer devices** converts the factory new IBM Selectric II\* to a computer output terminal which meets rigid industrial specifications, using custom engineered and manufactured solenoids for print commands.

### EVERYTHING YOU'VE HOPE FOR

- Clearest, finest printed copy available
- 31 Changeable type fonts and sizes, including OCR, script and italics
- 15 characters per second
- 130 character line length
- Full upper and lower case alphanumeric characters
- Tab command

### ALL ELECTRONICS SUPPLIED

Power supplies, cable connections and all necessary electronics are provided to permit direct connection to the parallel port of any computer.

Full Price: \$1,295

### NOT A KIT

The **SELECTERM** from **micro computer devices** is delivered completely assembled and is factory warranted by both IBM and **micro computer devices**. Conversion to a hard copy terminal in no way interferes with the standard IBM Selectric\* warranty.

### DUAL PERSONALITY

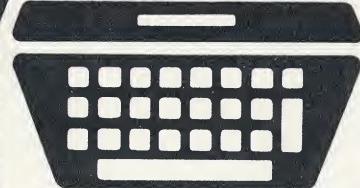

All the features of the IBM Selectric II\* may be used for your output terminal. And it can also be used as your typewriter, because conversion to a hard copy device has not interfered with its capability to perform as a standard typewriter.

### OPTIONS

Backspace	\$ 25.00
Index (vertical tab)	\$ 25.00
Margin Bell	\$ 25.00
Dual Pitch	\$100.00
Correction feature	\$100.00

### ANSWERS TO SOME OF YOUR QUESTIONS

- Q What is the SELECTERM?
- A The SELECTERM is a brand new IBM SELECTRIC typewriter with all of the actuators, solenoids, opto-electronics, ect. installed, wired and tested. It also includes the entire electronic package and power supplies, likewise, all wired and tested.
- Q What is the price of the SELECTERM?
- A The retail price is \$1295.
- Q What code?
- A Standard Ascii.
- Q How does the SELECTERM interface with the computer?
- A The SELECTERM goes directly to the parallel port of any computer. No additional interface of electronics is required.
- Q Can the SELECTERM still be used as a regular typewriter?
- A Absolutely! The addition of our applique in no way affects the typewriter being used as a standard machine in home or office.
- Q Getting back to the SELECTERM under computer control, are all keyboard characters available?
- A Yes!
- Q What about the machine commands?
- A All standard machine commands such as shift, space, carriage return and tab are included at the above price. Backspace, index and bell can be added for an additional \$25 each.
- Q What is index?
- A That is what we, in the computer world, know as vertical tab or line feed.
- Q Is the SELECTERM both an input and an output device?
- A No. Just an output terminal.
- Q Why not input also?
- A The cost of converting the keyboard to an input device would cost over \$250. Even then it would not have all the Ascii characters or machine commands such as < and > (less than, greater than) or ^ (raise to a power). It would not have brackets [] as well as (). There would not even be a key to type the BELL command as well as other control keys. It is wiser (and cheaper) to purchase a separate Ascii keyboard with all the features for about \$50.
- Q What about those symbols for greater than, less than etc. that you just mentioned? I know they do not appear on the standard SELECTRIC element
- A You're right! We supply a special element at no extra charge, with the above symbols. The prom in the electronics package is programmed to type these symbols when called for by the software.

- Q Is the bell option actually a bell?  
A No. We wire a solid state tone generator into the typewriter which is activated by the Ascii bell command.
- Q Are there any other options?  
A Yes. If desired you can order a machine with the dual pitch and/or the correction feature.
- Q What is dual pitch.  
A I was just coming to that. We supply a SELECTRIC II with 10 pitch, that is 10 characters to the inch, 130 characters to the line. The dual pitch machine offers the standard 10 pitch, or, at a flip of a lever, the machine goes into the 12 pitch mode giving 12 characters to the inch and 155 characters per line.
- Q How much extra are these options?  
A Correction and/or dual pitch cost \$100 each. The exact price IBM charges us.
- Q What if I want the 12 pitch machine instead of the standard 10 pitch?  
A Sure. Its available, on special order, no extra charge.
- Q What about color?  
A No problem. Our standard colors are blue and beige. We keep a small quantity of other colors on hand. Any standard IBM color can be ordered. No extra charge.
- Q How do I order a SELECTERM?  
A As all of our sales are via one of our dealers you must order from your favorite dealer.
- Q What about delivery?  
A Due to the demand delivery is running 6 to 8 weeks. The sooner you order the sooner you will get delivery.
